PRODUCTION STYLE

Instrumental

Vocal work

SFX/ Production

PROFILE

From an early age, I've been captivated by the intricate details of how music is crafted. Melodies come to me vividly—clear as the morning sky—and I simply transcribe what I hear in my imagination. Over time, I've sharpened this instinct into a focused craft, steadily building my discography with the goal of meaningful, creative collaboration.

PROJECTS

The Red Rose

Rising Tides

- Designed and developed a full-length, single-player RPG using RPG Maker MV, delivering 8 hours of fully playable content.
- Created all game assets independently, including art, narrative, music, sound design, gameplay systems, and direction.
- Wrote and implemented a branching storyline focused on themes of found family, self-discovery, and purpose, offering multiple player-driven endings.
- Built a rich, emotionally driven narrative experience with strong emphasis on character development and player choice.
- Applied end-to-end project management skills to bring a complex solo game project from concept to release.

OverWhelm

Game Project Built For Web Browsers

2025

- Built a one-screen, top-down eight-directional shooter using JavaScript, HTML, and CSS.
- Developed a standalone desktop version using Electron.js for cross-platform distribution.
- Designed and implemented all game mechanics, visuals, and interface elements as a solo developer.
- Composed and produced full original soundtrack and sound effects to support gameplay and atmosphere.
- Delivered a complete, self-contained game experience with polished presentation and responsive controls.

Concept Album - Adversity by Veneeru

Music Album

2023

- Composed and produced a concept album exploring life's emotional stages—from listlessness and aimlessness to personal empowerment and purpose.
- Scored each track to reflect shifting emotional tones, using music to convey complex psychological themes.
- Self-produced and mastered the entire album in FL Studio 22 by ear, supported by a solid foundation in music theory.
- Designed original sound effects to give each track a unique sonic identity and enhance listener immersion.
- Managed all aspects of the project independently, from composition and arrangement to production and mastering.
